sceSaveDataDialogParamInit

Macro for call parameter initialization

Definition

Arguments

param Call parameter

Return Values

None

Description

This is a macro function for initializing the Save Data Dialog call parameter.

Before performing the various call parameter settings, be sure to use this macro to execute structure initialization. The appropriate SDK version is set at the same time.

Examples

See Also

SceSaveDataDialogParam

sceSaveDataDialogInit

Call various functions of Save Data Dialog

Definition

Arguments

param Call parameter

Return Values

Returns $SCE_OK(0)$ as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_BUSY	0x80020401	The Common Dialog function is already
		being called (details below)
SCE_COMMON_DIALOG_ERROR_NULL	0x80020402	NULL was specified for the param argument
SCE_COMMON_DIALOG_ERROR_	0x8002047F	Internal error
UNEXPECTED_FATAL		

Description

This function calls the Save Data Dialog function.

This function can be called only when other Common Dialog functions are not called (including the function of Save Data Dialog proper). If this function is called at times other than the above, SCE_COMMON_DIALOG_ERROR_BUSY is returned. When calling this function is successful, the operation status immediately changes to SCE_COMMON_DIALOG_STATUS_RUNNING. For details on the operation statuses, refer to the sceSaveDataDialogGetStatus() section.

In param, specify the call parameter structure for which the operation mode, the display target save data ID, display character string, etc. were set.

Be sure to set values for paramafter performing initialization with the sceSaveDataDialogParamInit() macro.

The param instance need not be allocated after this function is called, but some of the pointer reference parameters must be held until calling of the Save Data Dialog function is ended by calling <code>sceSaveDataDialogTerm()</code>. For parameters which must be held, refer to the descriptions for individual parameters. Parameters can be released after the function is called unless otherwise noted.

If the content of <code>param</code> is invalid, a parameter error will occur, and <code>SCE_SAVEDATA_DIALOG_ERROR_PARAM</code> will return to <code>SceSaveDataDialogResult.result</code>, which is obtained with <code>sceSaveDataDialogGetResult()</code>. As an exception, only when <code>param.commonParam.bgColor</code> (background color) is not set to NULL, the API immediately returns <code>SCE_SAVEDATA_DIALOG_ERROR_PARAM</code>, resulting in a failure of the call.

This function is multithread safe.

reserved Reserved area (fill with all 0s)

Description

This is a structure passed to sceSaveDataDialogInit() to display Save Data Dialog. Use sceSaveDataDialogParamInit() to initialize it.

Specify the SDK version in *sdkVersion*. An appropriate value is input when the structure is initialized with *sceSaveDataDialogParamInit()*.

The display state of info bar and dimmer color can be specified with <code>commonParam</code>; however, the background color cannot be specified. For details, refer to the "Common Dialog Reference" document.

Specify the operation mode in mode. One of the following values is input.

SCE CONFIDENTIAL

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_MODE_FIXED	1	Save data fixed display
SCE_SAVEDATA_DIALOG_MODE_LIST	2	Save data list display
SCE_SAVEDATA_DIALOG_MODE_USER_MSG	3	User specified message display
SCE_SAVEDATA_DIALOG_MODE_SYSTEM_MSG	4	System defined message display
SCE_SAVEDATA_DIALOG_MODE_ERROR_CODE	5	Error code display
SCE_SAVEDATA_DIALOG_MODE_PROGRESS_BAR	6	Progress bar display

Specify the display wording type of Save Data Dialog in <code>dispType</code>. One of the following values is input.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_TYPE_SAVE	1	Save wording display
SCE_SAVEDATA_DIALOG_TYPE_LOAD	2	Load wording display
SCE_SAVEDATA_DIALOG_TYPE_DELETE	3	Delete wording display

For example, if SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_CONFIRM is specified with the system defined message display setting described later, one of the following messages will be displayed:

- In the case of SCE SAVEDATA DIALOG TYPE SAVE, "Do you want to save the data?"
- In the case of SCE SAVEDATA_DIALOG_TYPE_LOAD, "Do you want to load this saved data?"
- In the case of SCE_SAVEDATA_DIALOG_TYPE_DELETE, "Do you want to delete this saved data?"

The structure storing the save data fixed display setting is passed to <code>fixedParam</code>. For details, refer to the <code>SceSaveDataDialogFixedParam</code> section. If an operation mode other than <code>SCE SAVEDATA DIALOG MODE FIXED</code> was specified, this value must be set to NULL.

The structure storing the save data list display setting is passed to <code>listParam</code>. For details, refer to the <code>SceSaveDataDialogListParam</code> section. If an operation mode other than <code>SCE SAVEDATA DIALOG MODE LIST</code> was specified, this value must be set to NULL.

The structure storing the user specified message display setting is passed to userMsgParam. For details, refer to the SceSaveDataDialogUserMessageParam section.

If an operation mode other than SCE_SAVEDATA_DIALOG_MODE_USER_MSG was specified, this value must be set to NULL.

The structure storing the system defined message display setting is passed to <code>sysMsgParam</code>. For details, refer to the <code>SceSaveDataDialogSystemMessageParam</code> section.

If an operation mode other than <code>SCE_SAVEDATA_DIALOG_MODE_SYSTEM_MSG</code> was specified, this value must be set to NULL.

The structure storing the error code display setting is passed to <code>errorCodeParam</code>. For details, refer to the <code>SceSaveDataDialogErrorCodeParam</code> section. If an operation mode other than <code>SCE SAVEDATA DIALOG MODE ERROR CODE</code> was specified, this value must be set to NULL.

The structure storing the progress bar display setting is passed to progBarParam.

For details, refer to the SceSaveDataDialogProgressBarParam section.

If an operation mode other than <code>SCE_SAVEDATA_DIALOG_MODE_PROGRESS_BAR</code> was specified, this value must be set to NULL.

The structure containing slot settings is passed to <code>slotConfParam</code>. If specification is not necessary, set to NULL.

For details, refer to the SceSaveDataDialogSlotConfigParam section.

The operating environment of Save Data Dialog is specified in *flag*. The following options can be specified in this SDK.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_ENV_FLAG_DEFAULT	0	Default setting

The value specified in userdata can be received as SceSaveDataDialogResult.userdata when sceSaveDataDialogGetResult() is called.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

SceSaveDataDialogFixedParam

Structure for fixed save data display

Definition

Members

targetSlot Specifies save data slot ID of display target save data (details below) reserved Reserved area (fill with all 0s)

Description

This structure is used to perform the setting for the fixed save data display. It is used when calling Save Data Dialog in the SCE_SAVEDATA_DIALOG_MODE_FIXED mode. Fill it with all 0s during initialization.

The save data specified in targetSlot is displayed on the screen along with thumbnails and other information. For details on the specification of the save data to be displayed, refer to the "Specification of Save Data" chapter.

The definition of the SceAppUtilSaveDataSlot structure is located in include/apputil.h. For details, refer to the "Application Utility Reference" document.

The save data specified here is displayed on the screen along with thumbnails and other information.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

Definition

Members

slotListSpecifies the IDs of the list display target save data with a list (details below)slotListSizeSpecifies the number of items of the list of save data specified in dataListfocusPosSpecifies the initial focus position on the list (details below)focusIdSpecifies the initial focus position during save data ID specificationlistTitleSpecifies the title of the list (details below)itemStyleSpecifies the display style of the listed item (details below)reservedReserved area (fill with all 0s)

Description

This structure is used to perform the settings for save data list display. It is used when calling Save Data Dialog in the SCE SAVEDATA DIALOG MODE LIST mode. Fill it with all 0s during initialization.

The save data specified in slotList is displayed on the screen along with thumbnails and other information. For details on the specification of the save data to be displayed, refer to the "Specification of Save Data" chapter. The slotList's referent must be held until sceSaveDataDialogTerm() has been called, and the Save Data Dialog function call has been completed.

The number of units of save data specified in <code>slotListSize</code> is searched and displayed from the head of <code>slotList</code>. The maximum number that can be specified is defined by <code>SCE SAVEDATA DIALOG SLOTLIST MAXSIZE</code>.

The following value is input in focusPos.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_FOCUS_POS_LISTHEAD	0	List head
SCE_SAVEDATA_DIALOG_FOCUS_POS_LISTTAIL	1	List tail
SCE_SAVEDATA_DIALOG_FOCUS_POS_EMPTYHEAD	2	Empty slot head
SCE_SAVEDATA_DIALOG_FOCUS_POS_EMPTYTAIL	3	Empty slot tail
SCE_SAVEDATA_DIALOG_FOCUS_POS_DATAHEAD	4	Data head
SCE_SAVEDATA_DIALOG_FOCUS_POS_DATATAIL	5	Data tail
SCE_SAVEDATA_DIALOG_FOCUS_POS_DATALATEST	6	Latest data
SCE_SAVEDATA_DIALOG_FOCUS_POS_DATAOLDEST	7	Oldest data
SCE_SAVEDATA_DIALOG_FOCUS_POS_ID	8	Slot ID specification

For focusId, specify the focus target save data when SCE_SAVEDATA_DIALOG_FOCUS_POS_ID is specified to focusPos. If the specified save data is not saved in the list, the focus corresponds to the list head.

The title of the save data list to be displayed can be specified with UTF-8 character string in <code>listTitle</code>. String termination must be NULL. Line breaks cannot be inserted. The maximum size is <code>SCE_SAVEDATA_DIALOG_LIST_TITLE_SIZE</code>. If NULL is specified, a system default message will be displayed in accordance with the specified value of <code>SceSaveDataDialogParam</code>. <code>dispType</code>.

The display style of the listed item can be specified in *itemStyle*. The following values are input.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_LIST_ITEM_STYLE_TITLE_	0	Performs display on three
DATE_SUBTITLE		lines, in the order of
		Title/Date/Subtitle.
SCE_SAVEDATA_DIALOG_LIST_ITEM_STYLE_TITLE_	1	Performs display on three
SUBTITLE_DATE		lines, in the order of
		Title/Subtitle/Date.
SCE_SAVEDATA_DIALOG_LIST_ITEM_STYLE_TITLE_	2	Performs display on two
DATE		lines, in the order of
		Title/Date.

buttonType Specifies the type of button displayed on the dialog (details below)

Arbitrary character string displayed on the screen (NULL termination, UTF-8)

Specifies the type of button displayed on the dialog (details below)

targetSlot Specifies the save data slot ID of the display target save data (details below)

Reserved area (fill with all 0s)

Description

This structure is used to perform the setting for the user specified message display.

It is used when calling Save Data Dialog in the SCE_SAVEDATA_DIALOG_MODE_USER_MSG mode. Fill it with all 0s during initialization.

One of the following values is input in buttonType.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_BUTTON_TYPE_OK	0	Displays 1 button, the OK button
SCE_SAVEDATA_DIALOG_BUTTON_TYPE_YESNO	1	Displays 2 buttons, the Yes button and the No button
SCE_SAVEDATA_DIALOG_BUTTON_TYPE_NONE	2	Does not display buttons

Save Data Dialog for which SCE_SAVEDATA_DIALOG_BUTTON_TYPE_NONE has been specified cannot be closed by user operation. It must be closed from the caller side by using sceSaveDataDialogSubClose() at an arbitrary timing.

In *msg*, specify the character string to be displayed on the screen with UTF-8. The character string termination must be NULL. Up to three line breaks can be inserted and the maximum size is SCE_SAVEDATA_DIALOG_USER_MSG_SIZE. When a string exceeding the maximum size is specified, the exceeding section will be cut off.

The save data specified in targetSlot is displayed on the screen along with thumbnails and other information. For details on the specification of the save data to be displayed, refer to the "Specification of Save Data" chapter.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

SceSaveDataDialogSystemMessageParam

Structure for system defined message display

Definition

Members

sysMsgTypeSpecifies the type of message to be displayed (details below)valueSpecifies a value during a message call requiring an additional valuetargetSlotSpecifies the save data slot ID of the display target save data (details below)reservedReserved area (fill with all 0s)

Description

This structure is used to perform the setting for the system defined message display. It is used when calling Save Data Dialog in the SCE_SAVEDATA_DIALOG_MODE_SYSTEM_MSG mode. Fill it with all 0s during initialization.

One of the following values is set in sysMsgType. The message to be displayed will automatically switch between saving, loading, etc. based on the value set for

SceSaveDataDialogParam.dispType.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE	1	Displays "There is no saved data."
NODATA		
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE	2	Displays "Do you want to save the data?",
CONFIRM		"Do you want to load this saved data?" or
		"Do you want to delete this saved data?"
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_	3	Displays "Do you want to overwrite this
OVERWRITE		saved data?"
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_	4	Displays "There is not enough free space on
NOSPACE		the memory card. To continue using the
		application, you must create at least XXXX
		MB of free space.
		Press the PS button to pause this
		application, and then delete other
		applications or content."
SCE_SAVEDATA DIALOG SYSMSG TYPE	5	Displays "Saving
PROGRESS		Do not power off the system or close the
COR CALIEDAMA DIALOC CUCMOC MUDE		application.", "Loading" or "Please wait"
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_ FINISHED	6	Displays "Saving complete.", "Loading
		complete." or "Deletion complete."
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_	7	Displays "Do you want to cancel saving?",
CONFIRM_CANCEL		"Do you want to cancel loading?" or "Do
		you want to cancel deleting?"
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_	8	Displays "The file is corrupt."
FILE_CORRUPTED		1

Value	(Number)	Description	
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_	9	Displays "Could not save the file.	
NOSPACE_CONTINUABLE		There is not enough free space on the	
		memory card.	
		To save your progress in the application,	
		you must create at least XXXX KB of free	
		space.	
		To create the free space, press PS button to	
		pause this application, and then delete other	
		applications or content."	
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_	12	Displays "There is no saved data that can be	
NODATA_IMPORT		used with this application.	
		If the saved data you want to use is on a PS	
		Vita card, select the import saved data icon	
		on the LiveArea™ screen.	

Save Data Dialog for which SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_PROGRESS has been specified for sysMsgType cannot be closed by user operation. It must be closed from the caller side by using sceSaveDataDialogSubClose() at an arbitrary timing.

If SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_NOSPACE and SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_NOSPACE_CONTINUABLE are specified in <code>sysMsgType</code>, the insufficient space requested by the last insufficient file system free space error occurring will be formatted into appropriate units and displayed in the message. The application cannot specify the insufficient space displayed. If the application's save data drive (savedata0:) is mounted to the PlayStation®Vita card, an error notification ("An error has occurred. (C2-13322-1, 0x80100aa0)") will be displayed instead of a message.

File system free space will run out when saving save data with the application utility library, or when saving a database with libSceSqlite; therefore, display this message when file system free space runs out with these libraries.

Specify 0 in value.

The save data specified in targetSlot is displayed on the screen along with thumbnails and other information. For details on the specification of the save data to be displayed, refer to the "Specification of Save Data" chapter.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

errorCodebecifies the error code to be displayedSpecifies the save data slot ID of the display target save data (details below)Reserved area (fill with all 0s)

Description

This structure is used to perform the setting for the error code display. It is used when calling Save Data Dialog in the SCE_SAVEDATA_DIALOG_MODE_ERROR_CODE mode. Fill it with all 0s during initialization.

Specify the error values returned by the various library APIs in <code>errorCode</code>. The error values are converted into the appropriate expression and displayed. The displayed dialog has one button, the **OK** button. The message to be displayed will automatically switch between saving, loading, etc. based on the value set for <code>SceSaveDataDialogParam</code>. <code>dispType</code>.

The save data specified in targetSlot is displayed on the screen along with thumbnails and other information. For details on the specification of the save data to be displayed, refer to the "Specification of Save Data" chapter.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

barType Specifies the type of progress bar

sysMsgParam Specifies the type of message to be displayed (details below)

msg Arbitrary character string to be displayed on the screen (NULL termination, UTF-8)

targetSlot Specifies the save data slot ID of the display target save data (details below)

reserved Reserved area (fill with all 0s)

Description

This structure is used to perform the setting for the progress bar display. It is used when calling Save Data Dialog in the SCE_SAVEDATA_DIALOG_MODE_PROGRESS_BAR mode. Fill it with all 0s during initialization.

Save Data Dialog for which SCE_SAVEDATA_DIALOG_MODE_PROGRESS_BAR has been specified cannot be closed by user operation. It must be closed from the caller side by using sceSaveDataDialogSubClose() at an arbitrary timing.

The following value is input in barType.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_PROGRESSBAR_TYPE_PERCENTAGE	0	Display progress bar
		expressed as a
		percentage

Specify <code>sysMsgParam</code> to display a system defined message at the same time as the progress bar. For details on the <code>structure</code> itself, refer to the <code>SceSaveDataDialogSystemMessageParam</code> section.

The following value can be specified in <code>sysMsgParam.sysMsgType</code>.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_SYSMSG_TYPE_PROGRESS	5	Display "Saving/Loading
		Please wait."

Specify *msg* to display a user specified character string at the same time as the progress bar. Specify the character string to be displayed on the screen with UTF-8. The character string termination must be NULL. Up to three line breaks can be inserted and the maximum size is

SCE_SAVEDATA_DIALOG_USER_MSG_SIZE. When a string exceeding the maximum size is specified, the exceeding section will be cut off.

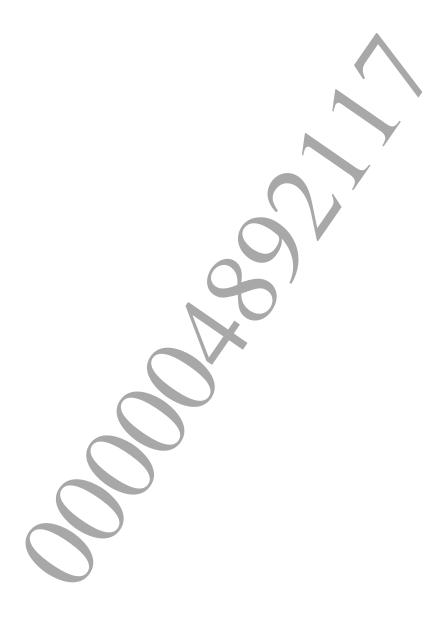

*sysMsgParam and msg cannot be specified simultaneously. If a value is specified in sysMsgParam.sysMsgType, NULL must be specified in msg. Also, if no value is set in sysMsgParam.sysMsgType, a parameter error occurs even if NULL was set to msg.

The save data specified in <code>targetSlot</code> is displayed on the screen along with thumbnails and other information. For details on the specification of the save data to be displayed, refer to the "Specification of Save Data" chapter.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

mountPoint Specifies the location of the save data slot for displaying (details below)

appSubDir

reserved Reserved area (fill all with zeroes)

Description

This structure performs save data slot settings. It sets the interpretation of all save data slot parameters specified when Save Data Dialog is called. Fill all with zeroes at the initialization.

Save Data Dialog processing is performed for the save data slots present on the save data mount point specified in <code>mountPoint</code>. Either "savedata0:" or "savedata1:" can be specified. When NULL is specified, the function will behave as if the "savedata0:" have been specified.

appSubDir can specify the subdirectories under app0: for the file path specified in the SceAppUtilSaveDataSlot structure. If specification is not necessary, specify NULL. For details, refer to the SceSaveDataDialogAppSubDirParam section.

reserved is a reserved area for future function expansion. It must be filled with zeroes.

sceSaveDataDialogGetStatus

Get operation status of Save Data Dialog

Definition

#include <savedata_dialog.h>
SceCommonDialogStatus sceSaveDataDialogGetStatus()

Arguments

None

Return Values

Returns one of the following operation statuses as the value of the function.

Value	(Number)	Description
SCE_COMMON_DIALOG_STATUS_NONE	0x0	Save Data Dialog is not running
SCE_COMMON_DIALOG_STATUS_RUNNING	0x1	Save Data Dialog is running
SCE_COMMON_DIALOG_STATUS_FINISHED	0x2	Save Data Dialog operation has finished

Description

This function gets the operation status of Save Data Dialog.

The default value of the operation status is SCE_COMMON_DIALOG_STATUS_NONE.

When calling sceSaveDataDialogInit() is successful, the operation status immediately changes to SCE COMMON DIALOG STATUS RUNNING.

The operation status of Save Data Dialog does not change automatically to SCE_COMMON_DIALOG_STATUS_FINISHED until sceSaveDataDialogFinish() or sceSaveDataDialogAbort(), described later, is called.

sceSaveDataDialogTerm() can be called only while the operation status is SCE COMMON DIALOG STATUS FINISHED.

When sceSaveDataDialogTerm() is called, the operation status immediately changes to SCE COMMON DIALOG STATUS NONE.

This function is multithread safe

Examples

SceCommonDialogStatus stat = sceSaveDataDialogGetStatus();

See Also

sceSaveDataDialogInit(), sceSaveDataDialogSubClose(), sceSaveDataDialogAbort(),
sceSaveDataDialogGetResult(), sceSaveDataDialogTerm()

sceSaveDataDialogGetSubStatus

Get operation substatus of Save Data Dialog

Definition

#include <savedata_dialog.h>
SceCommonDialogStatus sceSaveDataDialogGetSubStatus()

Arguments

None

Return Values

Returns one of the following operation statuses as the value of the function.

Value	(Number)	Description
SCE_COMMON_DIALOG_STATUS_NONE	0x0	Save Data Dialog is not running
SCE_COMMON_DIALOG_STATUS_RUNNING	0x1	Save Data Dialog is running
SCE_COMMON_DIALOG_STATUS_FINISHED	0x2	Save Data Dialog operation has finished

Description

This function gets the operation substatus of Save Data Dialog. For the substatus details, refer to the "Save Data Dialog Overview" document.

This function can be called only while the operation status is

SCE_COMMON_DIALOG_STATUS_RUNNING. If this function is called at times other than the above, SCE_COMMON_DIALOG_STATUS_NONE is returned.

When calling sceSaveDataDialogInit(), sceSaveDataDialogContinue(), or sceSaveDataDialogFinish() is successful, the operation substatus immediately changes to SCE COMMON DIALOG STATUS RUNNING.

When Save Data Dialog is closed either through user operation or by calling sceSaveDataDialogSubClose(), the operation substatus changes to SCE_COMMON_DIALOG_STATUS_FINISHED after a while. sceSaveDataDialogGetResult(), sceSaveDataDialogContinue(), and sceSaveDataDialogFinish() can be called only while the operation status is SCE_COMMON_DIALOG_STATUS_FINISHED.

This function is multithread safe.

Examples

SceCommonDialogStatus stat = sceSaveDataDialogGetSubStatus();

See Also

Increase progress bar rate

Definition

Arguments

target Target to be increased delta Increase value

Return Values

Returns SCE_OK(0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors:

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NOT_RUNNING	0x80020404	Called during other than
	V	appropriate time
		(details below)
SCE_COMMON_DIALOG_ERROR_NOT_SUPPORTED	0x80020405	Not support the current
	/	operation mode
		(details below)
SCE_SAVEDATA_DIALOG_ERROR_PARAM	0x80100b01	Parameter error
\ X		(details below)
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This function increases the progress bar rate of Save Data Dialog displaying the progress bar. The label indicating the progress rate is updated according to the increasing progress rate, and the progress bar extends smoothly with an animated image.

This function can be called only when the Save Data Dialog operation mode is SCE_SAVEDATA_DIALOG_MODE_PROGRESS_BAR. If called during other operation modes, SCE_COMMON_DIALOG_ERROR_NOT_SUPPORTED is returned

Also, this function can be called only when both the Save Data Dialog operation status and operation substatus are during the time of SCE_COMMON_DIALOG_STATUS_RUNNING. If called at other times, SCE_COMMON_DIALOG_ERROR_NOT_RUNNING is returned.

Call while these conditions are satisfied.

Refer to the sceSaveDataDialogGetStatus() section for details on operation status and the sceSaveDataDialogGetSubStatus() section for details on operation substatus.

Specify the target of which the progress rate is to be increased to target. The following value is set.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_PROGRESSBAR_TARGET_BAR_DEFAULT	0	Progress bar
		expressed as
		a percentage

©SCEI

SCE_SAVEDATA_DIALOG_ERROR_PARAM will be returned as the value of the function when values other than the above are specified.

Specify the increase value of the progress rate to <code>delta</code>. The initial value of the progress bar rate, which is acquired by specifying <code>SCE_SAVEDATA_DIALOG_PROGRESSBAR_TYPE_PERCENTAGE</code> to <code>SceSaveDataDialogProgressBarParam.barType</code>, is 0%. The percentage is increased by the value specified to <code>delta</code>, and the maximum value is 100%. Even if it is attempted to increase the progress rate after reaching 100%, the rate will not be changed.

This function is multithread safe.

Specify progress bar rate

Definition

Arguments

target Target to be specified Value to be specified

Return Values

Returns SCE_OK(0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NOT_RUNNING	0x80020404	Called during other than
		appropriate time
		(details below)
SCE_COMMON_DIALOG_ERROR_NOT_SUPPORTED	0x80020405	Not support the current
	/	operation mode
		(details below)
SCE_SAVEDATA_DIALOG_ERROR_PARAM	0x80100b01	Parameter error
		(details below)
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This function specifies the progress bar rate of Save Data Dialog displaying the progress bar. The label indicating the progress rate is updated according to the specified progress rate, and the length of the progress bar immediately changes to a suitable length without an animated image.

This function can be called only when the Save Data Dialog operation mode is SCE_SAVEDATA_DIALOG_MODE_PROGRESS_BAR. If called during other operation modes, SCE_COMMON_DIALOG_ERROR_NOT_SUPPORTED is returned.

Also, this function can be called only when both the Save Data Dialog operation status and operation substatus are during the time of SCE_COMMON_DIALOG_STATUS_RUNNING. If called at other times, SCE_COMMON_DIALOG_ERROR_NOT_RUNNING is returned.

Call while these conditions are satisfied.

Refer to the sceSaveDataDialogGetStatus() section for details on operation status and the sceSaveDataDialogGetSubStatus() section for details on operation substatus.

Specify the target of which the progress rate is to be specified to target. The following value is input.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_PROGRESSBAR_TARGET_BAR_DEFAULT	0	Progress bar
		expressed as a
		percentage

©SCEI

SCE_SAVEDATA_DIALOG_ERROR_PARAM will be returned as the value of the function when values other than the above are specified.

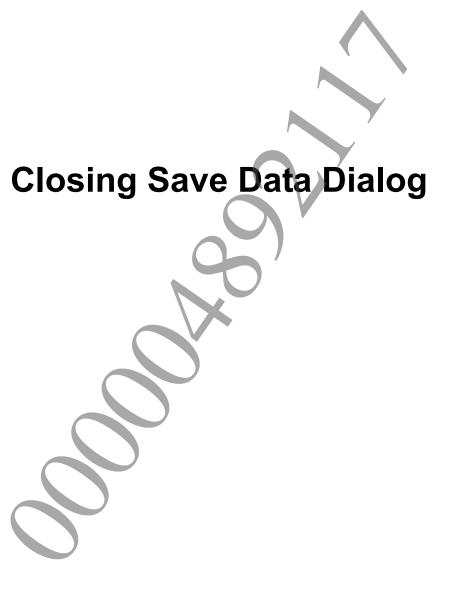

Specify the progress rate to be specified to rate. The maximum value of the progress bar rate, which is acquired by specifying SCE_SAVEDATA_DIALOG_PROGRESSBAR_TYPE_PERCENTAGE to SceSaveDataDialogProgressBarParam.barType, is 100%. If a value larger than this is specified, the value is automatically rounded to 100%.

This function is multithread safe.

sceSaveDataDialogSubClose

Close Save Data Dialog

Definition

```
#include <savedata_dialog.h>
SceInt32 sceSaveDataDialogSubClose()
```

Arguments

None

Return Values

Returns SCE OK (0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NOT_RUNNING	0x80020404	Called during other than
		appropriate operation
		substatus (details below)
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This function closes Save Data Dialog.

This function can be called only while the operation substatus of Save Data Dialog is SCE_COMMON_DIALOG_STATUS_RUNNING. If this function is called at times other than the above, SCE_COMMON_DIALOG_ERROR_NOT_RUNNING is returned.

If calling this function is successful, the operation status changes to SCE_COMMON_DIALOG_STATUS_FINISHED after the finish processing.

Note that these are not operation statuses.

For details on the operation statuses, refer to the sceSaveDataDialogGetSubStatus() section.

When Save Data Dialog is closed with this function, calling sceSaveDataDialogGetResult() returns the following.

```
SceSaveDataDialogResult.result :0
SceSaveDataDialogResult.buttonId :SCE_SAVEDATA_DIALOG_BUTTON_ID_INVALID
```

Since a user specified message dialog for which SCE_SAVEDATA_DIALOG_BUTTON_TYPE_NONE was specified as the button type, or some of system defined message dialog without the buttons and the progress bar dialog, cannot be closed through user operation, they must be closed with this function at an arbitrary timing. This function can be used also for other Save Data Dialogs that can be closed through user operation.

This function is multithread safe.

Examples

sceSaveDataDialogGetSubStatus(), sceSaveDataDialogGetResult()

sceSaveDataDialogGetResult

Get call result of Save Data Dialog

Definition

Arguments

result Stores the call result

Return Values

Returns $SCE_OK(0)$ as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NULL	0x80020402	NULL was specified in the
		argument result
SCE_COMMON_DIALOG_ERROR_NOT_FINISHED	0x80020410	Called during other than the
		appropriate operation status
		(details below)
SCE_SAVEDATA_DIALOG_ERROR_PARAM	0x80100b01	Parameter error (details
		below)
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This function retrieves the call result of Save Data Dialog.

This function can be called only while the operation status or the operation substatus of Save Data Dialog is SCE_COMMON_DIALOG_STATUS_FINISHED. If it is called at times other than the above, SCE_COMMON_DIALOG_ERROR_NOT_FINISHED is returned. For details on the operation statuses, refer to the sceSaveDataDialogGetStatus() section, and for details on the operation substatuses, refer to the sceSaveDataDialogGetSubStatus() section.

The call result of Save Data Dialog is stored in result. For details on the call results, refer to the SceSaveDataDialogResult section.

Be sure to initialize the argument result before passing it to this function.

If SceSaveDataDialogResult. reserved is not filled with 0s, SCE_SAVEDATA_DIALOG_ERROR_PARAM is returned as the value of the function.

This function is multithread safe.

Structure for retrieving Save Data Dialog call result

Definition

Members

moae	Stores mode at the time of call
result	Stores the call result (details below)
buttonId	Stores the ID of the button selected by the user (details below)
slotId	Stores the save data slot ID of the save data that is displayed or selected (details below)
slotInfo	Stores the detailed information of the save data indicated by slotId.
	If not required, NULL specification is possible
userdata	User specified data (details below)
reserved	Reserved area (fill with all 0s)

Description

This structure receives the Save Data Dialog call result. It is passed to sceSaveDataDialogGetResult (). Fill it with all 0s during initialization.

The value of SceSaveDataDialogParam. mode specified with sceSaveDataDialogInit() or sceSaveDataDialogContinue() is stored. It can be used to determine which function's calling result it is.

The call result of Save Data Dialog is stored in result. In the case of success, one of the following positive values is stored.

Value	(Number)	Description
SCE_COMMON_DIALOG_RESULT_OK	0x0	User selected button.
		Closed with
		<pre>sceSaveDataDialogSubClose()</pre>
SCE_COMMON_DIALOG_RESULT_USER_CANCELED	0x1	User performed cancel operation.
SCE_COMMON_DIALOG_RESULT_ABORTED	0x2	Abortion through
		sceSaveDataDialogAbort()

In the case of an error, one of the following error codes (negative value) is stored.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_ERROR_PARAM	0x80100b01	Parameter error
SCE COMMON DIALOG ERROR UNEXPECTED FATAL	0x8002047F	Internal error

One of the following values is input in buttonId.

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_BUTTON_ID_INVALID	0	No button was selected
SCE_SAVEDATA_DIALOG_BUTTON_ID_OK	1	The OK button was selected
SCE_SAVEDATA_DIALOG_BUTTON_ID_YES	1	The Yes button was selected
SCE_SAVEDATA_DIALOG_BUTTON_ID_NO	2	The No button was selected

The following save data slot IDs of the display target save data specified with sceSaveDataDialogInit() are stored in slotId.

- SceSaveDataDialogFixedParam.targetSlot.id
- SceSaveDataDialogUserMessageParam.targetSlot.id
- SceSaveDataDialogSystemMessageParam.targetSlot.id
- SceSaveDataDialogErrorCodeParam.targetSlot.id
- SceSaveDataDialogProgressBarParam.targetSlot.id

The ID of the save data selected by the user is stored only when the save data list display function is called. However, if the list has been closed with a cancel operation,

SCE APPUTIL SAVEDATA SLOT ID INVALID(0xffffffff) is returned.

The detailed information of the save data can be additionally retrieved by specifying the address of the structure in <code>slotInfo</code>. For details, refer to the <code>SceSaveDataDialogSlotInfo</code> section. This can also be omitted by specifying NULL.

The value of SceSaveDataDialogParam. userdata specified with sceSaveDataDialogInit() or sceSaveDataDialogContinue() is stored in userdata.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

The following are typical call result examples.

User selected the OK button

```
result
```

buttonId : SCE SAVEDATA DIALOG BUTTON ID OK

User selected the Yes or the No button

result. : 0

buttonId : SCE SAVEDATA DIALOG BUTTON ID YES / SCE SAVEDATA DIALOG BUTTON ID NO

User selected the Cancel button (Cross button on the top left of the list display screen)

```
result
         :SCE COMMON DIALOG RESULT USER CANCELED
         :SCE SAVEDATA_DIALOG BUTTON ID INVALID
```

Save Data Dialog was closed with sceSaveDataDialogSubClose()

buttonId : SCE SAVEDATA DIALOG BUTTON ID INVALID

Save Data Dialog was closed with sceSaveDataDialogAbort()

```
:SCE COMMON DIALOG RESULT ABORTED
buttonId : SCE SAVEDATA DIALOG BUTTON ID INVALID
```

See Also

```

```

SceSaveDataDialogSlotInfo

Save data slot information structure

Definition

Members

isExist Information on whether the save data slot exists or not (0: no 1: yes)

Stores parameter of the save data slot
If not required, NULL specification is possible.

Reserved Reserved area (fill with all 0s)

Description

This structure stores save data slot information.

Fill it with all 0s during initialization.

One of following is returned to *isExist*

Value	Description
0	Save data slot does not exist
1	Save data slot exists

By specifying address to the entity of SceAppUtilSaveDataSlotParam structure to slotParam, system file parameter of the save data can be retrieved additionally.

For details on the SceAppUtilSaveDataSlotParam structure, refer to the "Application Utility Reference" document. This can also be omitted by specifying NULL.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

If reserved is not filled with all 0s, a parameter error will occur, and SCE_SAVEDATA_DIALOG_ERROR_PARAM will return to SceSaveDataDialogResult.result, which is obtained with sceSaveDataDialogGetResult().

```
sceSaveDataDialogGetResult(),
SceSaveDataDialogResult,SceAppUtilSaveDataSlotParam
```

sceSaveDataDialogContinue

Continuously call Save Data Dialog

Definition

Arguments

param Call parameter

Return Values

Returns SCE OK(0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NULL	0x80020402	NULL was specified for the
		argument param
SCE_COMMON_DIALOG_ERROR_NOT_RUNNING	0x80020404	Called during other than
		appropriate operation status
		(details below)
SCE_COMMON_DIALOG_ERROR_NOT_FINISHED	0x80020410	Called during other than
		appropriate operation
		substatus (details below)
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This function continuously calls Save Data Dialog.

When this function is called while the operating status of Save Data Dialog is other than SCE_COMMON_DIALOG_STATUS_RUNNING, SCE_COMMON_DIALOG_ERROR_NOT_RUNNING is returned. Furthermore, when this function is called while the operation substatus is not SCE_COMMON_DIALOG_STATUS_FINISHED, SCE_COMMON_DIALOG_ERROR_NOT_FINISHED is returned.

Call this function while both conditions are satisfied.

For details on the operation statuses, refer to the sceSaveDataDialogGetStatus() section, and for details on the operation substatuses, refer to the sceSaveDataDialogGetSubStatus() section.

The param specification method is the same as for sceSaveDataDialogInit(). This function continues to call a different Save Data Dialog function while maintaining the display of the save data on the screen.

If some of the param settings (see list below) are omitted (0 is specified) when calling sceSaveDataDialogContinue(), the value specified with sceSaveDataDialogInit() is inherited.

 \bullet dispType

Also, the following setting will be ignored:

• commonParam

This function is multithread safe.

©SCEI

sceSaveDataDialogFinish

Finish continuous call of Save Data Dialog

Definition

Arguments

finishParam Finish processing setting parameter

Return Values

Returns SCE_OK(0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NULL	0x80020402	NULL was specified in the
		argument finishParam
SCE_COMMON_DIALOG_ERROR_NOT_RUNNING	0x80020404	Called during other than the
		appropriate operation status
		(details below)
SCE_COMMON_DIALOG_ERROR_NOT_FINISHED	0x80020410	Called during other than the
		appropriate operation
		substatus (details below)
SCE COMMON DIALOG ERROR UNEXPECTED FATAL	0x8002047F	Internal error

Description

This function ends calling of Save Data Dialog.

Even when Save Data Dialog is closed through user operation or <code>sceSaveDataDialogSubClose()</code>, the operation substatus simply changes to <code>SCE_COMMON_DIALOG_STATUS_FINISHED</code> and the operation status remains <code>SCE_COMMON_DIALOG_STATUS_RUNNING</code>. The operation status changes to <code>SCE_COMMON_DIALOG_STATUS_FINISHED</code> when this function is called.

This is because, each time one function is called, a choice is made between continuing the save flow (sceSaveDataDialogContinue()) or finishing it (sceSaveDataDialogFinish()).

When this function is called while the operation status of Save Data Dialog is other than SCE_COMMON_DIALOG_STATUS_RUNNING, SCE_COMMON_DIALOG_ERROR_NOT_RUNNING is returned. Furthermore, when this function is called while the operation substatus is not SCE_COMMON_DIALOG_STATUS_FINISHED, SCE_COMMON_DIALOG_ERROR_NOT_FINISHED is returned.

Call this function while both conditions are satisfied.

For details on the operation statuses, refer to the sceSaveDataDialogGetStatus() section, and for details on the operation substatuses, refer to the sceSaveDataDialogGetSubStatus() section.

Specify the Save Data Dialog finish processing in finishParam. For details, refer to the SceSaveDataDialogFinishParam section.

This function is multithread safe.

SceSaveDataDialogFinishParam

Structure for Save Data Dialog finish processing setting

Definition

Members

flag Processing setting flag reserved Reserved area (fill with all 0s)

Description

This structure sets the finish processing of Save Data Dialog. It is passed to sceSaveDataDialogFinish(). Fill all with zeroes at the initialization.

The following value is input in flag.

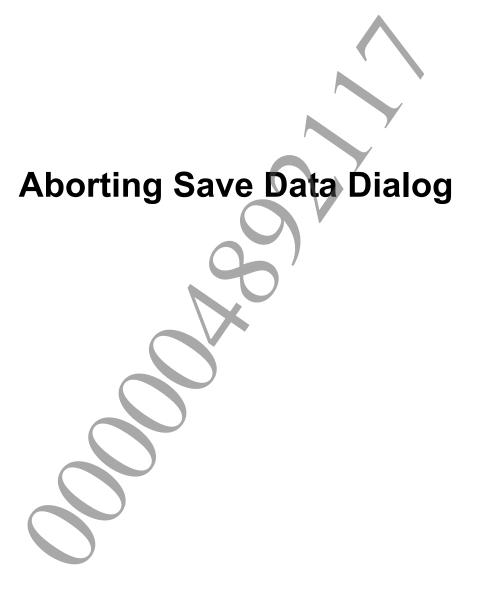

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_FINISH_FLAG_DEF	AULT 0	Default processing

reserved is a reserved area for future function expansion. It must be filled with all 0s.

See Also

sceSaveDataDialogFinish()

sceSaveDataDialogAbort

Abort call of Save Data Dialog

Definition

#include <savedata_dialog.h>
SceInt32 sceSaveDataDialogAbort()

Arguments

None

Return Values

Returns $\mathtt{SCE_OK}\,(\mathtt{0})$ as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NOT_IN_USE	0x80020411	<pre>sceSaveDataDialogInit()</pre>
		is not called
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This function aborts calling of Save Data Dialog.

It can be called at any time between when <code>sceSaveDataDialogInit()</code> is called and <code>sceSaveDataDialogTerm()</code> is called. If it is called at times other than the above, <code>SCE COMMON DIALOG ERROR NOT IN USE</code> is returned.

When calling is successful, Save Data Dialog will begin to abort processing.

When processing is completely aborted, the operation status will change to SCE COMMON DIALOG STATUS FINISHED.

For details on the operation statuses, refer to the sceSaveDataDialogGetStatus() section.

When Save Data Dialog is closed with this function, calling sceSaveDataDialogGetResult() returns the following.

```
SceSaveDataDialogResult.result : SCE_COMMON_DIALOG_RESULT_ABORTED
SceSaveDataDialogResult.buttonId : SCE_SAVEDATA_DIALOG_BUTTON_ID_INVALID
```

sceSaveDataDialogAbort () is used to promptly abort the Save Data Dialog display, for example when an urgent interrupt must be processed. Since the finish processing may be skipped, use sceSaveDataDialogSubClose() when wishing to close Save Data Dialog normally from the caller side.

This function is multithread safe.

Examples

sceSaveDataDialogSubClose(), sceSaveDataDialogGetResult()

sceSaveDataDialogTerm

End call of Save Data Dialog

Definition

```
#include <savedata_dialog.h>
SceInt32 sceSaveDataDialogTerm()
```

Arguments

None

Return Values

Returns SCE OK (0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NOT_FINISHED	0x80020410	Called during other than the
		appropriate operation status
		(details below)
SCE_COMMON_DIALOG_ERROR_NOT_IN_USE	0x80020411	<pre>sceSaveDataDialogInit()</pre>
		is not called
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This function ends calling of Save Data Dialog. Calling must be ended with this function after Save Data Dialog has been called with sceSaveDataDialogInit().

This function can be called only while the operation status of Save Data Dialog is SCE_COMMON_DIALOG_STATUS_FINISHED. If it is called during times other than the above, SCE_COMMON_DIALOG_ERROR_NOT_FINISHED is returned.

SCE_COMMON_DIALOG_ERROR_NOT_IN_USE will be returned if the Save Data Dialog function is not called.

If calling this function is successful, the operation status changes immediately to SCE_COMMON_DIALOG STATUS_NONE. For details on the operation statuses, refer to the sceSaveDataDialogGetStatus() section.

This function is multithread safe.

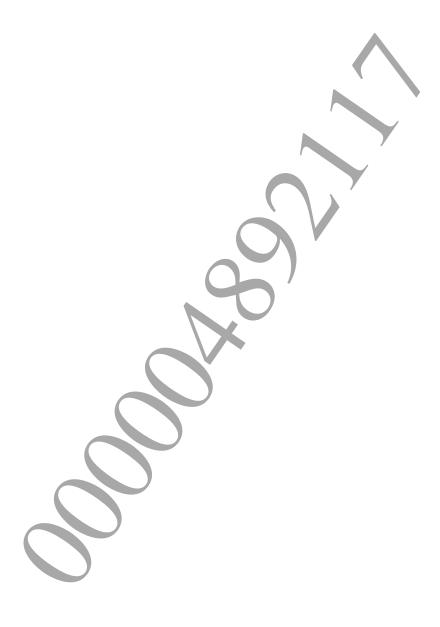

Examples

```
SceCommonDialogStatus stat;
while(1) {
         stat = sceSaveDataDialogGetStatus();
         if( stat == SCE_COMMON_DIALOG_STATUS_FINISHED ) {
                sceSaveDataDialogTerm();
                     break;
          }
}
```

targetDirNameList

focus Pos Specifies the initial focus position on the list

focusDirName Specifies the initial focus position when specifying with a directory name

listTitle Specifies the title of the list

itemStyle Specifies the display style of the listed item

reserved Reserved area (fill with all 0s)

Description

This is a version of the SceSaveDataDialogListParam structure for save data for PSPTM. Its basic specifications are the same as SceSaveDataDialogListParam.

The save data specified in <code>targetDirNameList</code> is displayed on the screen along with thumbnails and other information. The <code>targetDirNameList</code>'s referent must be held until <code>scePspSaveDataDialogTerm()</code> has been called, and the Save Data Dialog function call has been completed.

The number of units of save data specified in <code>dirNameListSize</code> is searched and displayed from the head of <code>targetDirNameList</code>. The maximum number that can be specified is defined by <code>SCE SAVEDATA DIALOG SLOTLIST MAXSIZE</code>.

For focusDirName, specify the focus target save data when

SCE_SAVEDATA_DIALOG_FOCUS_POS_ID is specified to *focusPos*. If the specified save data is not saved in the list, the focus corresponds to the list head.

The title of the save data list to be displayed can be specified with UTF-8 character string in <code>listTitle</code>. String termination must be NULL. Line breaks cannot be inserted. The maximum size is <code>SCE_SAVEDATA_DIALOG_LIST_TITLE_SIZE</code>. If NULL is specified, a system default message will be displayed in accordance with the specified value of <code>ScePspSaveDataDialogParam.dispType</code>.

The display style of the listed item can be specified in *itemStyle*. The following values are input.

Value	(Number)	Description
SCE_PSP_SAVEDATA_DIALOG_LIST_ITEM_	0	Performs display on three lines, in the
STYLE_TITLE_DATE_SUBTITLE		order of Title/Date/Subtitle.
SCE_PSP_SAVEDATA_DIALOG_LIST_ITEM_	1	Performs display on three lines, in the
STYLE_TITLE_SUBTITLE_DATE		order of Title/Subtitle/Date.

reserved is a reserved area for future function expansion. It must be filled with all 0s.

ScePspSaveDataDialogErrorCodeParam

Error code display structure for save data for PSP™

Definition

Members

errorCode Specifies the error code to be displayed Specifies the target directory name for the save data for PSPTM to display Reserved area (fill with all 0s)

Description

This is a version of the SceSaveDataDialogErrorCodeParam structure for save data for PSP^{TM} . Its basic specifications are the same as SceSaveDataDialogErrorCodeParam.

The save data specified in targetDirName is displayed on the screen along with thumbnails and other information.

See Also

ScePspSaveDataDialogProgressBarParam

Progress bar display structure for save data for PSP™

Definition

Members

barType Specifies the type of progress bar

sysMsgParam Specifies the type of system defined message to be displayed

msg Arbitrary character string to be displayed on the screen (NULL termination,

UTF-8)

targetDirName Specifies the target directory name for the save data for PSPTM to display

reserved Reserved area (fill with all 0s)

Description

This is a version of the SceSaveDataDialogProgressBarParam structure for save data for PSPTM. Its basic specifications are the same as SceSaveDataDialogProgressBarParam.

The save data specified in targetDirName is displayed on the screen along with thumbnails and other information.

scePspSaveDataDialogGetResult

Get Save Data Dialog call result for save data for PSP™

Definition

Arguments

result Stores the call result

Return Values

Returns SCE_OK(0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NULL	0x80020402	NULL was specified in the
		argument result
SCE_COMMON_DIALOG_ERROR_NOT_FINISHED	0x80020410	Called during other than the
		appropriate operation status
SCE_SAVEDATA_DIALOG_ERROR_PARAM	0x80100b01	Parameter error
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This is a version of sceSaveDataDialogGetResult() for save data for PSP^{TM} . Its basic specifications are the same as sceSaveDataDialogGetResult().

After calling the display features for save data for PSP^{TM} with scePspSaveDataDialogInit(), use this function to obtain the result.

Examples

```
SceCommonDialogStatus stat;
while(1) {
    stat = sceSaveDataDialogGetStatus();
    else if( stat == SCE_COMMON_DIALOG_STATUS_FINISHED ) {
        ScePspSaveDataDialogResult result;
        sceClibMemset( &result, 0, sizeof(result) );
        if( 0 > scePspSaveDataDialogGetResult( &result ) ) {
            // error
        }
        sceSaveDataDialogTerm();
        break;
    }
}
```

ScePspSaveDataDialogResult

Structure for obtaining Save Data Dialog call result for save data for PSP™

Definition

Members

mode
result
Stores the call result
buttonId
dirName
paramSfo
Stores system file (PARAM.SFO) information for the displayed or selected save data
(currently unsupported)
userdata
reserved
Reserved Reserved area (fill with all 0s)

Description

This is a version of the SceSaveDataDialogResult structure for save data for PSPTM. Its basic specifications are the same as SceSaveDataDialogResult.

In *dirName*, the following target directory names specified with scePspSaveDataDialogInit() for the save data for PSPTM to display will be stored.

- ScePspSaveDataDialogFixedParam.targetDirName
- ScePspSaveDataDialogUserMessageParam.targetDirName
- $\bullet \ \texttt{ScePspSaveDataDialogSystemMessageParam.} target \textit{DirName}$
- $\bullet \ \texttt{ScePspSaveDataDialogErrorCodeParam.} \ \textit{targetDirName}$
- ScePspSaveDataDialogProgressBarParam.targetDirName

The save data directory names for the save data selected by the user will be stored only when the save data list display feature for save data for PSPTM is called. However, if the list was closed with a cancel operation, an empty character string will be set.

For paramSfo, specify NULL.

SceAppUtilPspSaveDataParamSfo

System file (PARAM.SFO) structure for save data for PSP™

Definition

Members

saveDataDirectory Directory name (NULL-terminated, ASCII)

title (NULL-terminated, UTF-8)

saveDataTitle Save data title (NULL-terminated, UTF-8)

detail Detailed information (NULL-terminated, UTF-8)

parentalLev Parental control level

reserved Reserved area (fill with all 0s)

Description

This structure stores the system file (PARAM.SFO) information for save data for PSPTM.

In saveDataDirectory, the directory name of the save data for PSPTM is stored.

In title, the game title name is stored.

In saveDataTitle, the save data title name is stored.

For detail, detailed information for the save data is specified.

In parental Lev, the parental control level for the save data is stored.

ScePspSaveDataDialogResult

scePspSaveDataDialogContinue

Continuously call Save Data Dialog for save data for PSP™

Definition

Arguments

param Call parameter

Return Values

Returns SCE_OK(0) as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_NULL	0x80020402	NULL was specified for the
		argument param
SCE_COMMON_DIALOG_ERROR_NOT_RUNNING	0x80020404	Called during other than
		appropriate operation status
SCE_COMMON_DIALOG_ERROR_NOT_FINISHED	0x80020410	Called during other than
	1	appropriate operation
		substatus
SCE_COMMON_DIALOG_ERROR_UNEXPECTED_FATAL	0x8002047F	Internal error

Description

This is a version of the sceSaveDataDialogContinue() for save data for PSP^{TM} . Its basic specifications are the same as sceSaveDataDialogContinue().

The specification method for param is the same as with scePspSaveDataDialogInit().

Examples

```
SceCommonDialogStatus
while(1)
                sceSaveDataDialogGetStatus();
                  == SCE COMMON DIALOG STATUS FINISHED ) {
              ScePspSaveDataDialogParam param;
              ScePspSaveDataDialogErrorCodeParam errorCodeParam;
               scePspSaveDataDialogParamInit( &param );
              sceClibMemset( &errorCodeParam, 0, sizeof(errorCodeParam) );
              param.mode = SCE_SAVEDATA_DIALOG_MODE_ERROR_CODE;
              param.targetSlot = 0x01;
              param.errorCodeParam = &errorCodeParam;
              // set error code returned by library
              param.errorCodeParam->errorCode = ret;
              if ( scePspSaveDataDialogContinue( &param ) < 0 ) {</pre>
                      //error
              }
```

scePspSaveDataDialogTerm

Terminate Save Data Dialog call for save data for PSP™

Definition

```
#include <savedata_psp_dialog.h>
SceInt32 scePspSaveDataDialogTerm()
```

Arguments

None

Return Values

Returns ${\tt SCE_OK}\,({\tt O})\,$ as the value of the function for success.

Returns one of the following error codes (negative value) for errors.

Value	(Number)	Description
SCE_COMMON_DIALOG_ERROR_	0x80020410	Called during other than the appropriate
NOT_FINISHED		operation status
SCE_COMMON_DIALOG_ERROR_	0x80020411	scePspSaveDataDialogInit() is not called
NOT_IN_USE		
SCE_COMMON_DIALOG_ERROR_	0x8002047F	Internal error
UNEXPECTED_FATAL		

Description

This is a version of the sceSaveDataDialogTerm() structure for save data for PSPTM. Its basic specifications are the same as sceSaveDataDialogTerm().

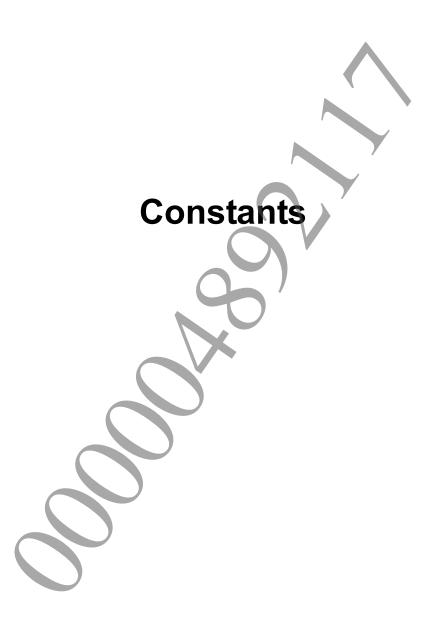

After calling the Save Data Dialog for save data for PSPTM with scePspSaveDataDialogInit(), be sure to use scePspSaveDataDialogTerm() to terminate the call.

Examples

```
SceCommonDialogStatus stat;
while(1) {
    stat = sceSaveDataDialogGetStatus();
    if( stat == SCE_COMMON_DIALOG_STATUS_FINISHED ) {
        scePspSaveDataDialogTerm();
        break;
}
```

Character string size

Maximum size of character strings of Save Data Dialog

Definition

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_LIST_	128	Size of character string that can be specified to
TITLE_SIZE		SceSaveDataDialogListParam.listTitle
SCE_SAVEDATA_DIALOG_USER_	256	Size of character string that can be specified to
MSG_SIZE		SceSaveDataDialogUserMessageParam. <i>msg</i>
		SceSaveDataDialogProgressBarParam.msg

Description

Save Data Dialog has a number of functions that can be displayed through specification of a user specified character string. The maximum size of the character string that can be specified is fixed for each function, so specify the character string within the above values. The values above are all the size including NULL termination.

Specify all the character strings with UTF-8.

Save Data Slot Maximum Size

The maximum size of the save data slot

Definition

Value	(Number)	Description
SCE_SAVEDATA_DIALOG_	256	The maximum size that can be specified in
SLOTLIST_MAXSIZE		SceSaveDataDialogListParam.slotListSize

Description

This is the largest number of save data that can be handled with the list display function of Save Data Dialog.

103	SceSaveDataDialogParam.commonParam.bgColoris not NULL
	ScePspSaveDataDialogParam.commonParam.bgColorisnotNULL
105	ScePspSaveDataDialogResult.paramSfo is not NULL

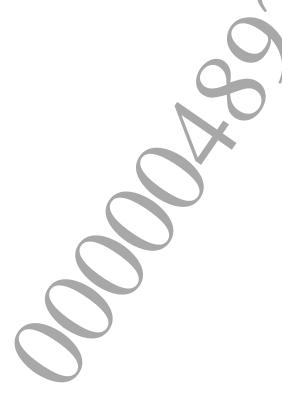

Description

If the contents of the structures specified for the various functions provided by Save Data Dialog are invalid, they are processed as parameter errors, and the operation status of Save Data Dialog changes immediately to SCE_COMMON_DIALOG_STATUS_FINISHED.

At this time, SCE_SAVEDATA_DIALOG_ERROR_PARAM returns to the return value of the called API or SceSaveDataDialogResult.result which can be obtained with sceSaveDataDialogGetResult() and ScePspSaveDataDialogResult.result which can be obtained with scePspSaveDataDialogGetResult().

Furthermore, the concrete parameter error occurrence locations are output to the console in the following format.

***** SceSaveDataDialog Parameter Error: XX ***** (XX is one of the above numbers)
Parameter errors are coding mistakes of the application and must absolutely be fixed before release.

SceAppUtilSaveDataSlotId

Save data slot ID type

Definition

#include <apputil.h>
typedef SceUInt32 SceAppUtilSaveDataSlotId;

Description

This type specifies specific save data in Save Data Dialog in general.

The scope of the value that can be specified is 0 <= id < SCE_APPUTIL_SAVEDATA_SLOT_MAX. Also, SCE_APPUTIL_SAVEDATA_SLOT_ID_INVALID is defined as the constant indicating an invalid value.

SceAppUtilSaveDataSlotEmptyParam

Empty slot specification structure

Definition

Members

title Title character string displayed in empty slot (NULL termination, UTF-8)

iconPath Specification of thumbnail image file

iconBufThumbnail image buffericonBufSizeThumbnail image buffer sizereservedReserved area (fill with all 0s)

Description

This structure specifies the empty slot for display if the specified display target save data does not exist, for the whole Save Data Dialog.

In title, specify the title character string to be displayed in the empty slot. If NULL is specified, the system default title is displayed. The maximum character string length (including NULL termination) that can be specified is defined in SCE_APPUTIL_SAVEDATA_SLOT_TITLE_MAXSIZE.

The thumbnail image file to be displayed in the empty slot is specified with a file path in <code>iconPath</code>. [a-z], [A-Z], [0-9], '-' (hyphen), '_ (underscore), '.' (dot), '/' (slash) and ':' (colon) can be used. Relative reference using ".." is not possible. The longest path length that can be specified is defined in <code>SCE_APPUTIL_SAVEDATA_SLOT_ICON_PATH_MAXSIZE</code>.

In <code>iconBuf</code>, specify with the memory the thumbnail image file to be displayed in the empty slot. The image file must be placed on the memory beforehand as a PNG file. If NULL is specified, the system default thumbnail is displayed. It cannot be specified simultaneously with <code>iconPath</code>.

In <code>iconBufSize</code>, specify the size of the image file placed in <code>iconBuf</code>.

SAVEDATA_ICON_FILE_SIZE_MAX is the maximum specifiable size. If NULL is specified in <code>iconBuf</code>, be sure to specify 0.

SceAppUtilSaveDataSlot

SceAppUtilSaveDataSlot

Save data item slot structure

Definition

Members

idSave data slot IDstatusSlot statususerParamUser parameter

emptyParam Empty slot specification structure

Description

This structure specifies specific save data slots in the whole Save Data Dialog.

In id, specify the target save data slot ID

To status specify the state of the save data slot. It can be specified with the following SceAppUtilSaveDataSlotStatus type values:

Value	(Number)	Description
SCE_APPUTIL_SAVEDATA_SLOT_STATUS_AVAILABLE	0	Available status
SCE APPUTIL SAVEDATA SLOT STATUS BROKEN	1	Broken status

When the entity to the SceAppUtilSaveDataSlotEmptyParam structure is specified in emptyParam, and the save data slot does not exist, empty save data display is done based on the structure's setting value. For details on the display contents, refer to the SceAppUtilSaveDataSlotEmptyParam section.

If the save data slot exists, save data display is performed based on the information of that save data slot, so the information of <code>emptyParam</code> is ignored.

Since userParam is not currently used, set 0.

If NULL is specified in *emptyParam*, display of that save data is not done if the save data slot does not exist.

SceAppUtilMountPoint

Mount point structure

Definition

Members

data Mount point name

Description

This structure indicates a mount point. It is used to specify the location of the save data slot which will be displayed by Save Data Dialog by specifying SceSaveDataDialogSlotConfigParam. Specify either "savedata0:" or "savedata1:" for data as a character string.

 ${\tt SceSaveDataDialogSlotConfigParam}$

SceAppUtilPspSaveDataDirName

Save data directory name structure for save data for PSP™

Definition

Members

data Directory name of save data for PSP™ (NULL-terminated, ASCII

Description

This structure stores the save data directory for save data for PSPTM. It is used throughout Save Data Dialog when specifying save data for PSPTM.

For data, specify the directory name of the target save data for processing. Depending on the functionality, it is also used for specifying a save data directory name prefix.
